Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS - Which crop suits my field? - I want a simple recommendation. - The result should be easy to understand.	THINKS - Wrong crop choice can reduce yield. - Soil and climate should be considered together. - Data can support better decisions.
FARMER <i>(Primary User)</i>	
DOES - Checks N, P, K and soil pH. - Observes temperature, humidity and rainfall. - Enters values in OptiCrop and reviews the result.	FEELS - Uncertain before choosing a crop. - Concerned about yield and investment. - Confident after a clear recommendation.
